When you tune your brain, you tune your life

08/15/2023

To Whom it May Concern,

Natren is the quintessential health component that we incorporate in our patient's healing protocols. We are a boutique psychiatry practice with vulnerable but discerning patients in which we use a whole body approach to target the brain, body, and gut.

We have repeatedly looked for another brand to recommend to our patients, because it's always good to have choice, we have been unable to find a single other company that meets our criteria for therapeutic-grade probiotics, with no danger of backlash in autoimmune conditions.

We have incorporated Natren's probiotic regimen into our private practice with all of our clients. In our experience, there is no doubt the addition of a probiotic regimen, like that offered by Natren, has had lasting and improved response with all of our patients. We have tried a number of other manufacturers and regimens, and nothing appears to have the positive results we see with Natren.

Our positive clinical results are likely accelerated secondary to gut balance provided by Natren, which results in a removal of the constant source of inflammation, and leaky gut. Results with Natren have been profound enough that we insist all of our patients be on this regimen during their treatment plan.

We plan to continue our work with Natren so that all of our patients can experience its healing affects from the inside out. Working with Natasha and her team has been delightful, as it is apparent that their company mission and ethics are aligned with our company's mission and vision. We look forward to not only continuing with clinical protocols but also pursuing clinical research with Natasha and team

Sincerely,

A handwritten signature in blue ink, appearing to read 'Rajagopal K. Sunder'.
