

A photograph of a woman with long brown hair and a green headband, sitting on a brown leather ottoman and reading a colorful book to a young child with blonde hair. The child is wearing a green shirt and a blue scarf. A large potted plant is visible in the background. The scene is warmly lit, suggesting a cozy indoor environment.

# AUTISM OBSERVATIONAL STUDY

## PROTREN PRECISION PROBIOTIC 12 WEEK REGIMEN

### GENERAL GUIDELINES

- Please record all the noticed improvements and relay to your probiotics specialist at the end of the 12 weeks.
- Please consider your child's swallowing ability for age 7 and younger when choosing capsules. The Trenev Trio can sit in a tablespoon of filtered water for 2 minutes or longer and it will soften and be easier to swallow. It can be chewed or mashed into a little applesauce or peanut butter. Ensure the spoon is clean and uncontaminated.
- Each product is safe at any level, you can't overdose. It is important to note that these are not drugs. At any time, this ProTren precision probiotic regimen can be titrated up or down as needed depending on the individual needs of each person. (The more than 100 trillion microbes we host in the 27 feet of our GI tract known as the human microbiota – can identify us as individuals much like a fingerprint. (Harvard TH Chan School of Public Health). The ProTren precision probiotic bacteria have evolved with human beings for thousands of years and are safe at any level.
- The 3 Life Start products (Life Start, Life Start 2 & Life Start Pro) can be used interchangeably depending on your patients sensitivity to dairy. When prescribing Life Start 2 powder, remind clients to mix it well with the water, juice or milk alternative they have chosen to use.

- Take all probiotics 2 hours away from prescription drugs (especially antibiotics) or herbal antimicrobials (echinacea, golden seal, oregano, garlic, etc.).  
- *It is better to wait less than 2 hours than miss the dose.*
- The above are for optimal success. Doses should not be missed, and still taken even if too close to a medication or meal.  
- *The only exception is the 2 hour waiting period before or after taking antibiotics or antimicrobials should not be compromised.*
- Swallow capsules and mix powders with non-chlorinated, unchilled, filtered water or non-acidic juice.
- For smoothies and shakes, don't mix probiotics in a blender – stir in probiotics after blending.

All of the probiotic species we use have been in the scientific literature for well over 100 years. It is our scientific opinion that these protocols will help you take an important step forward towards a more personalized probiotic therapy that will lead to superior patient outcomes in your clinical practice. They can serve as a valuable starting point in helping you obtain the best possible patient outcomes with probiotics in your clinical practice. ■
